Kajus Černiauskas

I am a student of Kaunas University of Technology, in the second year of software systems, seeking to continuously improve my knowledge in the constantly growing and in high demand field - IT. I aim to improve my skills in software development and improve not only as a professional but also as a person. After lectures, I do more research on topics which I found interesting. I also completed OWASP courses to learn about API security. Finished basics part of react.js from Udemy but continuing to learn more deeply. Currently enrolling at EPAM's bootcamp for .NET development course.
